

AUTHORIZED DISTRIBUTOR

AutoCrib is an innovator in "point-of-use" dispensing systems or tool vending machines, with over 4,000 installations worldwide. The basic concept of industrial vending has evolved into a wide variety of products that assist manufacturers in controlling perishable tooling, safety supplies, MRO supplies and other "indirect materials". The product line includes handheld scanners, automated lockers, automated cabinets, traditional vending, and robotic carousel systems. The systems are driven by AutoCrib's powerful tool crib software, allowing users to perform issue and return tasks at a traditional tool crib window while simultaneously managing many different types of point of use vending machines.

AutoCrib Benefits

AutoCrib system users typically experience cost savings in the following areas:

- **Item usage reduction of 20-40% through accountability**
- Eliminate lost items and shrinkage
- 24x7 access without increasing labor costs
 - Eliminate expensive production downtime
 - Make on time deliveries
 - Reduce shipping and expediting costs
- Reduced inventory levels and increased turns
- Reduction in walk around / trip time to obtain items
- Purchasing / Receiving costs reduced
- Extend reach of supply chain to plant floor
- Gain back valuable floor space
- Use existing employee badges for access to items

Additional data collection and reporting benefits:

- Collect cost data for profit analysis
- Collect data for SPC, ISO or QS certification
- Job costing for more accurate estimating
- Identify weak processes or problem areas

WE'LL BRING THE EQUIPMENT TO YOU WITH OUR NEW DEMO TRAILER!

AutoCrib Products

RoboCrib 2000 – Secure and manage the issue and return of over 2500 different items using the pie-shaped bins with the latest in smart carousel technology.

RDS – The original helix/coil-based Remote Dispensing System for managing fast moving items with a keypad or touch screen interface.

RoboCrib 1000 – Secure and manage the issue and return of over 1000 different items using a more compact and cost-efficient carousel-based platform.

MobileCrib and MiniCrib – Handheld scanners that provide mobility for users who manage issue and return transactions in a traditional tool crib or store.

RoboCrib 500 – Secure issue and return of 500+ items in less than 10 seconds. Can vend almost anything, including large or delicate items. No individual repackaging needed.

Tool Crib Station – Data entry terminal provides users the ability to issue and return items from a tool crib without the assistance of an attendant.

ScaleMate– The ScaleMate can dispense smaller items such as fasteners, while increasing control.

AutoCrib Client/Server Software – Windows program that drives AutoCrib's point-of-use dispensing products and simultaneously manages a tool crib or stores.

AutoLocker – With a variety of configurations, electronic lockers provide secure access to oversize, calibrated and durable items with issue and return capability.

AutoCrib.Net – A powerful web-based application which manages the system from a secure website, implemented as an alternative to our client/server software.

EleVend – High-speed dispensing, without repackaging for gloves, PPE and MRO supplies.

IntelliPort – A turnkey system of radio frequency identification (RFID) readers orientated at a choke point, to track movement of RFID tags in and out of a controlled area.
